Monitoring and Evaluation Plan

National Plan of Action for Implementation of IHR in

Bahrain 2012-2013

Introduction

The continuing increase in worldwide travel has led to an increased threat and risks that are of public health concern. Therefore, the overall purposes of health activities at international terminals are to manage health risks associated with the movement of people and goods through air, sea and land travel, and for managing the medical needs of travelers and others employed at, or visiting ports. While notification to WHO under the IHR (1969) focused only on 3 diseases (cholera, yellow fever and plague), the scope of notification under IHR (2005) is broadened to include a wide range of international public health risks such as biological, chemical, radio-nuclear and food contamination.

International Health Regulations (2005) are a set of legally binding regulation for all WHO member states which helps countries working together to prevent, protect against, control and respond to the international spread of disease while avoiding unnecessary interference with international traffic and trade. These regulations are also designed to reduce the risk of disease spread at international airports, ports and ground crossings. These regulations entered into force on 15 June 2007 and are binding on 194 countries across the world, including all World Health Organization (WHO) Member States.

World Health Organization's International Health Regulations 2005 state purpose is **“to prevent, protect against, control and provide a public health response to the international spread of disease in ways that are commensurate with and restricted to public health risks, and which avoid unnecessary interference with international traffic and trade”**, so these regulations ensure global health security.

Bahrain has recognized the importance of collective inter-sectorial action to manage health emergencies. If this fails to act, or act independently, it will result in a less than optimal response that will increase the harms to their citizens and disrupt the global economy. Compliance with the revised International Health Regulations is a critical step toward preventing this from happening. The National IHR committee, a key advocate for the regulations, should lead the way both by demonstrating its own compliance with the regulations and by championing their implementation in the country.

Bahrain IHR Vision

The vision of the Bahrain IHR is to **“minimize the health, economic and social impact of any public health events that might be of national and international concern.”**

It goes with the Bahrain vision 2030 **“The Bahrain Economic Vision 2030 is a long-term economic development plan that outlines the future path for the development of The Kingdom of Bahrain’s Economy and Society over the coming 21 years”**. It was created in

consultation with the government, private sectors, political leaders and international bodies and was intended to cover the period 2008-2030.

The Bahrain Vision 2030 pledges to improve the Bahraini standards of living as well as reform the Government, Education, Health sectors, increase privatization, and enhance the quality of life in Bahrain. It signals aspirations for a competitive global economy driven by a thriving private sector. The Vision also underscores the role of all Bahrainis and raises incomes and quality of life for all societal segments. It therefore outlines in skeleton form what it calls forward-looking policies in such critical areas as education, health care, infrastructure and the environment. However, social security and social justice are also accorded attention, with a focus on subsidies on water, electricity, gasoline and food exclusively targeting the needy; housing support for those most in need; and a high standard of social assistance giving all Bahrainis an equal start.

And it goes with the Ministry of Health vision **“To improve the health of population in Bahrain by partnership with stakeholders, in order to provide accessible, responsive, high quality service for all through their lifetime.”**

Bahrain IHR Mission

The Bahrain IHR mission is to **“improve health protection in Bahrain, to be prepared and to respond to a public health events that might be of national and international concern”**. It goes with Ministry of Health mission **“To ensure the provision of evidence-based care at all levels based efficient use of resources and encouragement of personal responsibility for health.”**

Bahrain IHR strategy

The Bahrain Strategy for IHR implementation is a road map to strengthen core capacities required for effective preparedness planning, prevention, prompt detection, characterization, containment and control of emerging infectious diseases which threaten national, regional and global health security. Implementation of IHR is an important stepping stone in fulfilling many of the requirements of the revised International Health Regulations (2005).

The advent of SARS, avian influenza and H1N1 underscores the importance of emerging diseases and their impact on health and economic development. By increasing globalization of public health events and the requirements of the IHR (2005), there is clearly value in developing such a strategy for Bahrain. The scope of threats is broad and includes objectives for the short, medium-and long-term capacity needed to reduce these threats.

Within the kingdom of Bahrain, this is supported by active engagement of higher authorities and concerned stakeholders in relevant sectors. Additionally, benefiting from the best available technical support for effective implementation of IHR (2005) by establishing regional and global health regulation network was done.

The aims of the IHR Strategy:

- To reduce the potential risks to the public's health posed by movement of persons and goods, and other trade activities with the avoidance of unnecessary interference with international traffic and trade by the year 2013.
- To prevent and Respond to International Public Health Emergencies
- To establish the legal and regulatory frameworks that specifies the roles of participating partners and stakeholders
- To ensure justification, assessment of measures and to facilitate a quick and timely response. Furthermore, regularly monitoring the progress indicators for the implementation of IHR 2005 is necessary for improvement.
- To strengthen the early warning system
- To ensure a rapid response.
- To strengthen the partnership by resource mobilization through intra -sectoral and inter-sectoral collaboration between various ministries and organization

This could be achieved through producing, implementing, exercising and harmonizing national public health actions to rapidly detecting and managing risks and public health events that might be of national of international concern.

Uses of the IHR Strategy in Bahrain:

- As a strategic document to guide the development or strengthening of the national core capacities required for health protection from events.
- As a framework for the development of stronger collaboration with neighboring countries, sub regional, regional and global networks and other technical partners to build a safety net.
- As a guide to meet the core capacity requirements for surveillance and response under IHR (2005).
- As a document for national and regional advocacy for adequate, equitable and sustainable health financing arrangements (including resource mobilization and donor coordination), human resource development, and sustainable knowledge, skills and technology transfer.
- As an operational plan base for IHR implementation.

Events threats do not respect international borders. Global partnerships and the rapid sharing of data and other information enhance preparedness and evidence-based control strategies for the emerging threats with their risk analysis and management, case management, epidemiology, public health, diagnostics and verification of results, laboratory bio-safety, infection control, logistics, risk communication, and other specialty areas.

With strong political support, a commitment to the global public goods and effective public health systems, the challenge can be met.

Bahrain IHR strategic goal

To establish a productive planning, prevention, prompt detection, characterization, and the containment and control of any Public Health events that might be of national and international concern by 2013.

Bahrain IHR goals and objectives

Goals 1: Partnership strengthening

To benefit from the best available technical support for effective implementation of IHR by establishing a regional and global health regulation network.

Resource mobilization through intra-sectoral and inter- sectoral collaboration between various ministries and organization within the kingdom of Bahrain. This is supported by active engagement of higher authorities and concerned stakeholders in relevant sectors.

Objectives to achieve the goal 1:

- To inform, train and actively involve the concerned stakeholders in relevant sectors in implementing the Regulations (short to intermediate)
- To ensure that higher authorities in the country understand the public health and economic benefits of implementing the revised Regulations and engage in resource mobilization activities to support their full implementation.(short term)
- To establish and be an active member in the regional and global health regulation network. (long term)

Goal 2: Strengthen National Capacity

To conduct an analysis of the available capacities to identify the gaps and plan for improvement.

Core capacity building should be strengthened in the field of national disease prevention, surveillance, control and response. Moreover, public health measures and response capacity building at designated ports of entry is required , as it has a recognized role in rapid detection and response to the risk of international disease spread.

Objectives to achieve the goal 2:

- To conduct assessment of the alert and response capacity in the country. (Short term)
- To perform gap analysis of the alert and response capacity and develop and implement national action plans to prevent, detect, and respond to public health threats (short term)
- To request WHO's technical support for national capacity building (short term)
- To train the concerned staff in the field of disease prevention, surveillance, risk assessment, control and response. (Intermediate)
- To ensure that PoE are kept free of infection or contamination, including vectors and reservoirs (long term)

- To ensure that routine measures, in compliance with IHR (2005), are in place for travelers, conveyances, cargo, goods and postal parcels (short term)
- To implement the public health contingency plan for public health events that might be of national and international concern at all designated PoE (intermediate)
- To ensure that designated points of entry have the capacity to rapidly implement international public health recommendations (short)
- To assess and strengthen surveillance system. (Short)
- To improve skills of public health inspectors who attend the ports. (Long)
- To establish an emergency planning compatible with IHR 2005. (Intermediate)
- To establish an educational and training plan. (Long)
- To establish a communication plan with the concerned parties. (Intermediate)
- To conduct a simulation exercises to elaborate Bahrain's emergency plan to face public health events that might be of national and international concern. (Long)
- To provide a feedback system about performance of concerned parties

Goal 3: Prevent and Respond To International Public Health Emergencies

To strengthen the early warning system to ensure a rapid response.

This could be achieved through producing, implementing, exercising and harmonizing national public health action to rapidly detecting and managing risks and public health events that might be of national and international concern.

Objectives to achieve the goal 3:

Preparedness and readiness for response and containment of the threats identified in IHR (2005) including involvement of local level.

- To develop plans for surveillance and early warning for specific risks at national level (infectious, food, chemical and radio-nuclear)
- To identify and implement risk reduction strategies
- To implemented international mechanisms for stockpiling critical supplies (vaccines, drugs, personal protective equipment (PPE) for priority threats critical supplies
- To implement the public health contingency plan for public health events that might be of national and international concern at all designated PoE
- To ensure that designated points of entry have the capacity to rapidly implement international public health recommendations.

Goal 4: Legal Issues assessment and Monitoring

To establish a legal and regulatory frameworks.

Establishment of the legal and regulatory frameworks that specify the roles of participating partners and stakeholders ensure justification of Assessment of measures and facilitate quick and timely response. Furthermore, regularly monitoring the progress indicators for the implementation of IHR 2005 is necessary for improvement.

Objectives to achieve the goal 4:

- To assess national public health legislation and to adapt it in line with the IHR (2005) Regulations.
- To designate the National IHR Focal Points (NFP)
- To monitor implementation of eight core capacities through a checklist of indicators, capacity development at PoE and capacity development for the four IHR-related hazards (zoonotic and food safety (biological), radiological and nuclear, and chemical)
- To establish IHR health policy and legislations.(intermediate)

Action Plan

- IHR situation analysis in Bahrain.**
- Establishment of IHR committees**
- Designation of the IHR focal point.**
- Identify responsibilities of the IHR committees and the IHR Focal Point.**
- Formulate policies and legislation related to IHR.**
- Formulate IHR strategies.**
- Development of training material and conducting training**
- Establish a reporting system**
- Establish a data analysis system, feedback and action taken program.**
- Time frame for implementation of the plan.**
- Monitoring of the IHR implementation in the country.**

IHR Situation analysis in Bahrain

The Ministry of Health, Directorate of Public Health requested a mission to take place from the 28th of November to the December 2, 2010 to evaluate the progress in the IHR implementation in Bahrain. Expert from WHO/EMRO conducted this mission with

coordination with Bahrain Desk Officer and NFP .Meeting with officials and field visits to relevant sectors to assess the capacities for the implementation of IHR was done. Finally the recommendation and the (POA) is formulated and submitted to NFP for implementation and follow up. The burden of epidemic borne disease and food related hazards are examined periodically and annually in order to identify the trend of these diseases and to ensure that control measures in place, however the burden of chemical and radio-nuclear hazards are not addressed adequately.

A quick situational analysis through visiting nominated ports and all sectors concerned with IHR implementation for assessment of core capacities available and discussions with district officials to provide basic information about the existence of a particular problem, its size and impact was done. To achieve that, we nominate the concerned parties and contact them by letters to cooperate with them to assess core capacity available and the required implementing of the IHR 2005 in Bahrain.

A. Identification of strengths, weaknesses, opportunities and threats

Area	Strength	Weaknesses	Opportunity	Threat
<p>Legislation and policy</p>	<ul style="list-style-type: none"> -National IHR focal point for coordination of IHR related activities was designated. -Revision of national laws in context of IHR is started and almost not limiting IHR implementation. -List of notifiable diseases which require mandatory notification of infectious and zoonotic diseases -Political support for implementation of IHR2005 	<ul style="list-style-type: none"> -Lack of approved SOPs for the function of NFP -Lack of mandatory notification of chemical and radio-nuclear events to NFP. 	<ul style="list-style-type: none"> -Updating the public health law now - The availability of National disaster committee covering all health hazards with authorization from prime minister 	<p>-</p>

<p>Surveillance</p>	<p>Detection:</p> <ul style="list-style-type: none"> -All diseases listed in Annex (2) of IHR (2005) are included in the notification forms except for small pox. -Notifiable disease list includes” unusual events” -Utilize the hospital discharge records as data source. -Active surveillance in place for AFP and measles. -Daily media scanning by NFP and public relation <p>Reporting</p> <p>Via well structured daily and weekly notification forms.</p> <p>Urgent Notification by telephone.</p> <p>Data management</p> <p>At central level data management done using Epi Info to generate monthly and annual reports.</p> <p>Feedback</p> <ul style="list-style-type: none"> -Quarterly communicable disease bulletin for reporting sites -Quarterly Feedback on the reporting. 	<ul style="list-style-type: none"> -Updated communicable disease with case definition -Lack of peripheral sites data management at least in term of time, place and person. -Lack of documented threshold values for epidemic prone diseases. 	<p>Utilize IT facility in MOH to invent electronic reporting system.</p>	<p>The emerging diseases</p>
----------------------------	--	--	--	------------------------------

Preparedness	<p>-The availability of disease specific national preparedness plan (Influenza H5N1, H1N1).</p> <p>-The assessment for emergency need of drugs and vaccines</p>	<p>-Lack of a national Comprehensive plan that includes all health hazards.</p>	<p>-IHR (2005) implementation</p> <p>-Pandemic H1N1</p>	<p>Financial limitation</p>
Risk communication	<p>-The availability of Public relation section which is responsible for communication all the time and during emergencies(trained staff)</p> <p>- The availability of hot lines and website for public communication during emergencies.</p>	<p>-Lack of social mobilization approach during emergencies</p> <p>-Lack of evaluation of risk communication process</p>	<p>-Pandemic H1N1</p> <p>-Transparency in the country in all aspect including health issues.</p>	<p>Delay the risk communication</p>
Human resources	<p>Training program is available in MOH and certain budget is allocated for Public health directorate training</p>	<p>No training need assessment in the context of IHR 2005 is performed.</p>	<p>-IHR (2005) implementation</p>	<p>Financial limitation</p>
Laboratory	<p>Confirmation: Public health lab(PHL) has the capacity to diagnose many disease</p> <p>Reference lab (RL): Bahrain has collaboration with regional RL in Oman for</p>	<p>-Lack of diagnostic facilities</p> <p>-Lack of availability of list of collaborating center in this regard.</p>	<p>-IHR (2005) implementation</p>	<p>Financial limitation</p>

	<p>polio and measles</p> <p>External quality assessment in collaboration with UK NEQAS for microbiology and WHO for tuberculosis drug resistance and measles panels.</p> <p>Specimen collection and transport: Program for all health facilities to collect and transport specimen to PHL.</p>	<p>-Lack of biosafety guidelines for transport of the specimens.</p>		
<p>Port of entry -Bahrain International Airport -Khalifa Sea Port -King Fahd Causeway</p>	<p>-The accessibility to medical service(with adequate staff and equipment) for care of ill traveler</p> <p>-The accessibility to facilities to transfer the ill traveler to appropriate medical facility</p> <p>-Availability of good services</p>	<p>-No designation of ports for IHR implementation.</p> <p>-No application of IHR documents(yellow fever vaccine certificate, SSCE, maritime declaration of health</p> <p>-Lack of training in inspection of the conveyances and vector control at POE</p>	<p>-IHR (2005) implementation</p>	<p>Financial limitation</p>

B. Identification of the stakeholders for IHR implementation in Bahrain

IHR stakeholders were identified based on IHR implementation requirements

A) IHR National Committee members from the following places were nominated:

- IHR Center. (IHR Focal Officer) at the Ministry of Health
- Communicable Diseases Unit at the Ministry of Health.
- Legal affairs in the Ministry of Health.
- Radiation Protection at the Ministry of Health.
- General Organization of Seaport (National Maritime Authority).
- Civil Aviation Affairs. (Bahrain Airport Company)
- Ministry of Agriculture and Animal Welfare.
- Ministry of Interior (Custom Directorate).
- Ministry of Interior (Civil Defense).
- Ministry of Information.
- Ministry of Foreign Affairs.
- General Directorate of Environment and Welfare Protection.
- Ministry of Industry and Commerce.
- Gulf Air Clinic.

B) The Ministry of Health IHR Taskforce group members from the following places were nominated:

Diseases Control Section
Food control section
Environmental section
Environment Section
Public Health Laboratory
Primary Health Care Directorate
Health Promotion Directorate
Pharmacy & Drug Control Directorate
Legal Affairs

C. Assessment of core capacity required at the PoE
at all times in Bahrain:

Task	Responsible section
1- Assessment of the medical diagnostic facilities used to care of ill travelers at the port	-Primary Health Care Directorate -ports authorities.
2- Assessment of the availability of equipment and personnel for the transport of ill travelers to an appropriate medical facility.	-Primary Health Care Directorate -ports authorities.
3- Adequate medical staff and paramedics for care of ill travelers at the port	-Primary Health Care Directorate
4- A. Inspection at the port For -communicable disease -Imported food -animals -drugs. B. Ship inspection	Ministry of Health -Public Health Directorate <Disease Control Section <Environmental Section <Food Control Section -Pharmacy and Drug Control Directorate Ministry of Municipalities and Agriculture
5- Safe environment for travelers using point of entry facilities	Public Health Directorate Environment Health Section
6- Control of vectors, reservoirs in, and near points of entry	Public Health Directorate Environment Health Section

**D. Assessment of Core Capacities required for
responding to PHEIC**

Task	Responsible section
<p>To provide appropriate public health emergency response by establishing and maintaining a public health emergency contingency plan, including the nomination of a coordinator and contact points for relevant point of entry, public health and other agencies and services;</p> <ul style="list-style-type: none"> - Bahrain Disaster plane -Bahrain plane for Avian flu pandemic. - H1N1 Pandemic plan, national IHR plan 	<p>-Public Health Directorate -concerned parties</p>
<p>To provide assessment of and care for affected travelers or animals by establishing arrangements with local medical and veterinary facilities for their isolation, treatment and other support services that may be required</p>	<p>-Primary Health Care Directorate -Ministry of Municipalities and Agriculture Affairs</p>
<p>To provide appropriate space, separate from other travelers, to interview suspect or affected persons.</p>	<p>Port authorities</p>
<p>To provide a place for the assessment and, if required, quarantine of suspect travelers, preferably in facilities away from the point of entry.</p>	<p>Ministry of Health</p>
<p>To apply recommended measures to disinsect, derat, disinfect, decontaminate or otherwise treat baggage, cargo, containers, conveyances, goods or postal parcels including, when appropriate, at locations specially designated and equipped for this purpose</p>	<p>-Public Health Directorate Environment Health Section -Port authorities</p>
<p>To apply entry or exit controls for arriving and departing travelers</p>	<p>-Port authorities -Public Health Directorate</p>
<p>To provide access to specially designated equipment, and to trained personnel with appropriate personal protection, for the transfer of travelers who may carry infection or contamination.</p>	<p>-Primary Health Care Directorate -Secondary Health Care.</p>

E. Identification of existing resources

Existing resources will be identified by concerned parties each in his field regarding manpower, place of work and equipment.eg. Communicable Disease Section manpower has 2 medical consultant and 8 public health specialist. Places for work: offices at the public health building. Equipments: including computers for each staff, printers, telephones, fax and cars.

Establish IHR committees

Two IHR committees were raised; one is a higher committee from different sectors related to IHR and the other task force committee the Ministry of Health. The national committee composed of members from:

- IHR Center at the Ministry of Health. (IHR Focal Officer) as a chairperson.
- Communicable Diseases Unit at the Ministry of Health.
- Legal affairs in the Ministry of Health.
- Radiation Protection at the Ministry of Health.
- General Organization of Seaport (National Maritime Authority).
- Civil Aviation Affairs. (Bahrain Airport Company)
- Ministry of Agriculture and Animal Welfare.
- Ministry of Interior (Custom Directorate).
- Ministry of Interior (Civil Defense).
- Ministry of Information.
- Ministry of Foreign Affairs.
- General Directorate of Environment and Welfare Protection.
- Ministry of Industry and Commerce.
- Gulf Air Clinic.

-The Ministry of Health task force group composed of members from the following sectors.

Diseases Control Section

Food control section

Environmental section

Environment Section

Public Health Laboratory

Primary Health Care Directorate

Health Promotion Directorate

Pharmacy & Drug Control Directorate

Legal Affairs

Designation of IHR Focal Point

Public Health Directorate **designated by Minister of Health as an IHR focal point.**
