

During the coming days

## Update precautionary protocol for **active cases**:

1

Active cases must quarantine at home as soon as they test positive under a PCR test

2

Active cases will have the quarantine feature on the 'BeAware Bahrain' application activated without needing to go to the diagnostic and treatment center

3

Those with acute symptoms, risk factors, and/or chronic disease are encouraged to head to the treatment center for assessment

Adults the **age of 50 and above** will be contacted by the Ministry for appointments.
